

## Why S.T.A.R. Aluminum Rail Systems?

**VERSATILITY** S.T.A.R. railing is a modular (knock-down) pre-finished railing system, capable of being field assembled to fit any deck configuration.

**SAVE MONEY** The system's ease of installation saves you time and money on labor. The modular rail design will also save you money and freight damage claims versus shipping bulky welded railing systems.

**ADJUSTABLE STAIR SYSTEM** Makes stair railing applications easy. The system will virtually adjust to any stair angle - making it the easiest system on the market to install. Our customers love the ease of assembly and so will you!

**ENGINEERED RAILING SYSTEMS** The heavy duty construction meets the requirements of the rigid North American building codes. It meets the stringent load designs of both the International Building Code (USA) and the National Building Code of Canada.

**EASY TO INSTALL** Easy field assembly makes it a snap to make rail modifications to fit any deck configuration. Installation can be completed without the need for any special tools. The rails "snap tight" design assembles to make a structurally integral railing system that won't rattle in the wind like other component systems on the market.

**KNOWLEDGABLE** The Nationwide S.T.A.R. Dealer Network can help you plan and design your railing needs to enhance your deck and patio project.

**LOW MAINTENANCE** An alternative to wood and steel systems that rot and rust and require restoration and repairing.

**LARGE SELECTION OF RAIL STYLES** Including post mounting options and various infill designs (multiple picket or glass designs) and a wide array of designer color offerings. We offer standard product offerings along with custom fabrication capabilities to meet your project needs.

**POWDER COATED ALUMINUM SYSTEM** We offer a variety of standard color options meeting AAMA 2604 specifications. Custom colors are also available. The powder coated finish is a tough, durable coating and is warranted under our S.T.A.R. Warranty protection plan.

**ENVIRONMENTALLY FRIENDLY** The powder coated finish is eco-safe putting no VOCs (volatile organic compounds) in the atmosphere like those found in most liquid coatings.

### SNAP TIGHT ALUMINUM RAILINGS

2 OF OUR MOST POPULAR RAILING DESIGNS  
**CLASSIC and COLONIAL**

The CLASSIC rail design features our heavy duty 2" posts with a continuous top rail to create a clean modern classic look. Our most popular seller. A variety of picket infill designs or safety glass infill options are also available.

The COLONIAL rail design features our heavy duty 2 3/4" posts with the rail running between the posts to create a traditional Colonial look. A variety of picket infill designs or safety glass infill options are also available.

# S.T.A.R.

The S.T.A.R. (Snap Tight Aluminum Rail) System is a unique component railing system. The aluminum railing components are assembled without the usage of any unsightly visible fasteners. A rubber mallet is used to SNAP the mating rail components together to create a strong integral railing system.

The S.T.A.R. System is constructed from high strength structural aluminum alloys. The engineered product is suitable for usage in both residential and multi-family commercial project applications. It meets or exceeds code compliance for stringent North American building codes.

The S.T.A.R. System is finished with an aesthetically pleasing powder coated finish for maximum endurance and abrasion resistance. The finish requires virtually no maintenance. There is no need for yearly sanding, painting and above all [ the S.T.A.R. System will not rust.
